

# HOW TO RECONSTITUTE WHOLE GOAT MILK POWDER

1. Measure right amount of warm water (110-120 Fahrenheit)
2. Slowly add powder to the warm water while mixing
3. Mix powder well to ensure powder is completely dissolved
4. Cool after dissolving the powder

Pounds of Powder	Gallons of water
1	0.9
5	4.5
10	9
20	18
55 (1bag)	50

For industrial users, overnight dissolving in a tank is sometimes advisable before using the reconstituted milk in your process.
